/lab host="Organ: pooled brain, lung, testis; Vector:
poww-sporfs, Site 1: Noti; Site 2: EcoRV (destroyed); RNA source anonymous pool of 6 male brains, age range 23-27; l male lung, age 27; and 1 male testis, age 69. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size is 8 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 021. Note: this is a NIH MGC Library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hordeum vulgare.

Hordeum vulgare.

Eukaryota, Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;

Spermatophyta, Magnoliophyta; Liliopsida; Poales; Poaceae; Pooideae;

Triticaee; Hordeum.

                                                                                                                                                                            outliving in the dark at loow temperature on inter paper with water, nystain and cefotaxime in covered crystallization dishes. Five-day old seedlings were incubated at 90% RH for 24 hr. Shocts were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified obbal library was made, 600000 pfu were primary unamplified cobal library was made, 600000 pfu were in vivo excised to give pbluescript SK(-) CDNA phagemids. These steps were performed in the TU Close laboratory at the University Genomics Institute (UGGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA perparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and

Size selected DNA was cloned into the PBACe3.6 vector at the EcoRI sites. The ligation products were transformed into PH10B electrocompetent cells (BRL Life Technologies).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. (E-mail: seqref@genoscope.cns.fr - Web: www.genoscope.cns.fr)
Fis GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces thermotolerans, Kluyveromyces angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to ke were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
/note="Vector: pBlueScript SK-; Site 1: Eco RI; Site 2: XhoI; The library is from primary xylem scraped from the roots of a twelve year old tree in the transitional phase from juvenile wood to mature wood production. NOTE: The sequences contain a 'cDNA adapter' between the EcoRI site and the start of the ESI. The adaptersequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            991 bp DNA linear GSS 05-JUL-2001
T3 end of clone AW0AA014D09 of library AW0AA from strain CLIB 89 of
Yarrowia lipolytica, genomic survey sequence.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

RESULT 1	
AB00552181	
LOCUS	AB005521S1 416 bp DNA linear PRI 14-APR-2000
DEFINITION	Homo sapiens ppar gamma gene for peroxisome proliferator
	activated-receptor gamma, exon 1.
ACCESSION	AB005521
VERSION	AB005521.1 GI:2605490
KEYWORDS	ppar gamma, ppar gamma common exonl; peroxisome proliferator
	activated-receptor gamma.
SEGMENT	1 of 6
SOURCE	Homo sapiens placenta DNA.
ORGANISM	Homo sapiens
	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
	Mammaila; burneria; Frimares; Cararrnin; Hominidae; Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 52 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (24-NOV-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 135011)

NOTE: This is a 'working draft' sequence. It currently consists of 55 contigs. The true order of the pieces is not known and thehar order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (22-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 3, 2002 this sequence version replaced gi:20386306.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlapping clone, as we submit sequences with
only a small overlapping clone, as we submit sequences with
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

* NOTE: This is a 'working draft' sequence. It currently
* Consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

                                                                                                                                                                                                                                                                      ò
                                                                                      The invention relates to an oncogene designated PAX8-PPARgammal that concains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acid comprising a control region of a human peroxisome proliferator activated receptor gamma (PPAR-gamma) gene. The nucleic acids are useful for screening for agents capable of modulating the expression of a human PPAR-gamma gene. These agents (modulators) form pharmaceutical compositions that are useful for treating diseases associated with high/low levels of human PPAR-gamma gene expression. The diseases include obesity, anorexia, cachexia, lipodystrophy, lipomas, liposarcomas, abnormalities associated with anti-human immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    virus (HIV) treatment, insulin resistance, non-insulin-dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mellitus (NIDDM), polycystic ovary syndrome, diseases of the gastrointestinal (GI) tract, inflammatory bowel disease, Crohn's disease,
methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAXB-PPARgamma1, where the disorder is cancer, e.g. follicular carcinoma. The PAXB-PPARgamma1 molecules are also useful for providing nucleotide and amino acid sequence useful for detecting the above disease. The present sequence represents a human PAXBeB-PPARgammae1 polypeptide encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; peroxisome proliferator activated receptor gamma; PPAR-gamma; regularory sequence; promoter; obesity; anorexia; lipoma; cachexia; lipodystrophy; liposarcoma; human immunodeficiency virus; HIV; insulin resistance; non-insulin-dependent diabetes mellitus; polycystic ovary syndrome; gastrointestinal tract; Crohn's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Newly isolated nucleic acid comprising a control region of a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          peroxisome proliferator activated receptor (PPAR) gamma gene useful for identifying modulators that are useful in treating diseases associated with abnormal levels of human PPAR-gamma gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an isolated, purified or enriched

ulcerative colitis and bowel cancer. The nucleic acids are useful for studying the role of the PPAR-gamma gene in various diseases and disorders. The structure of PPAR-gamma enables genetic studies of PPAR-gamma mutations in humans, and evaluation of its role in disorders like insulin resistance, NIDDM, and diseases associated with altered adipose tissue function, like obesity and lipodystrophic syndromes. The nucleic acids are also useful for gene therapy and the production of transgenic animals, which are useful in screening assays. The control regions of the nucleic acids enable screening for modulators of the human PPAR-gamma gene, which are useful in designing drugs for treating disorders or diseases associated with the level of PPAR-gamma gene expression.

The present sequence represents the human PPAR-gamma intron B, exon 1 and intron 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              energy

PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAKR-PPRAgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PPARgamma polypeptide encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a human peroxisome proliferator-activated receptor gamma (PPAR-gamma) polypeptide. PPAR are orphan receptors, and may play a role in proliferative and differentiation aspects of cancer. The PPAR-gamma polynucleonid is useful for detecting a mRNA transcript that encodes PPAR polypeptide. It is also useful for detecting hybrid formation. The PPAR-gamma polypeptide is useful for detecting hybrid formation. The PPAR-gamma polypeptide is useful for detecting hybrid formation.
                                              "peroxisome proliferator-activated receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a cytostatic activity. The method is invention has hepatoropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression,

The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgammal igand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer. e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the translocation fusion juncture in the PAX867-PPARgammael
                                                                                                                                                                                                                                                                                                                                                                                                                                              New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oncogene; cytostatic; PAX8; PPARgammal; cancer;
